### **First Internet Solutions Signs Two New Clients Using XML-based Policy Pricing Software**

(Sheboygan Falls, WI) – First Internet Solutions, LLC, a recognized leader in web-based Property & Casualty processing software, announces the addition Mount Carroll Mutual Insurance Company, Mount Carroll, IL and Wausau-Stettin Mutual Insurance Company, Wausau, WI.

Since March, 1, 2007 Mount Carroll's agents have utilized the Internet to process Homeowners and Dwelling Fire ACORD applications, and Wausau-Stettin's has agreed to supply their agents with quoting, rating and issuance their company specific Farmowners product.

By utilizing carrier specific rates and underwriting guidelines, their agents have the ability to produce a quick and accurate policy quote with minimal entry. Once the quoted premium is accepted, only then is additional information required to complete an ACORD® or company specific application. Accepted applications may be printed, emailed, populated to FIS' Policy Administration system, or automatically transferred to the carrier as the final step.

“We built a tool to put in the hands of the agents that is user-friendly, flexible, and accurate. The last thing you ever want to do is give an insured a policy that doesn't match the quote” explains, Brian Schaff, CPCU and lead developer of the product. Navigation through the pricing and acceptance of an application is completely self explanatory. Extensive use of carrier specific defaults and drop-down boxes, along with customizable underwriting guidelines, ensure accuracy seldom seen with comparative rating software. Final delivery of the application to the carrier via an XML stream completes the seamless and efficient straight-through-processing carriers have been striving for.

**Creating big company solutions for small companies.** First Internet Solutions, founded in 1999, offers their software as a service thus allowing any size company the processing power of larger companies.

Quoting, policy processing, expert underwriting, policy and claims inquiry, printing and imaging are supported.
