FOR IMMEDIATE RELEASE

First Internet Solutions Adds Hybrid Functionality to **equip**[®] Pricing Application

Sheboygan Falls, WI -- First Internet Solutions, LLC, a recognized leader in hosted web-based Property and Casualty processing software announces added functionality to their popular agent's **equip**[®] Pricing Application.

Coupled with built-in security and navigation, "Pricing with Changes" is the hybrid version that allows agents and underwriters to make changes to policy data, including back-dated changes, utilizing their user-friendly **equip**[®] Pricing Application – the same software used during the original submission to the carrier.

Current policy data is downloaded to the agent's browser where changes as minor as address updates or as complex as adding/deleting vehicles is accomplished. Pricing with Changes accurately updates each history segment based on one effective date automatically processing the on-set/off-set transaction; bringing the policy and billing data up-to-date.

Pricing with Changes provides visual indicators of the policy data fields that were modified, while ensuring the data integrity of the policy. Notification is provided through PWC if the underwriter has made changes via the host Policy Processing system.

The application provides underwriters the ability to electronically accept or reject a change, and if accepted, they can automatically issue the policy.
